

HDMI

Version 1.3a

The world has gone High Definition and HDMI V1.3 is the **ONLY** connector that will transfer True High Definition Video and High Definition Audio.

HDMI V1.3 offers an extensive range of new technology support for the next generation High definition sources and display panels

- Higher transfer speed of up to 10.2Gbps
- Deep Color support
- xvColour support for broader colour space
- New High Definition Audio compatible
- 1080p / 24Hz pass through for Blu ray
- SACD / DVD-A transfer
- Auto Lip Sync
- CEC, HDMI Control protocols

If you are buying a new generation flat panel television or a projector that is 10bit processing or better the only way to get the right signal into your display is via a HDMI V1.3 cable and device.

Previous version of HDMI (1.2, 1.1 & 1.0) will generate a picture and sound but it will limit the performance to 8bit picture and SD audio
