

Internet Radio

Previously the widespread use of Internet Radio was restricted by slow internet speeds and prohibitive bandwidth costs but now in 2010, ADSL2 is a reality in most areas and IP plans allowing up to 10gig of downloads for as little as AUD\$29.95 a month means that Internet Radio is now a very viable and accessible sound source for just about everyone

Denon products with built in Internet Radio tuners allow you to currently access over 14,000 stations from around the globe plus give you instant access to thousands of selected podcasts all without the use of a computer.

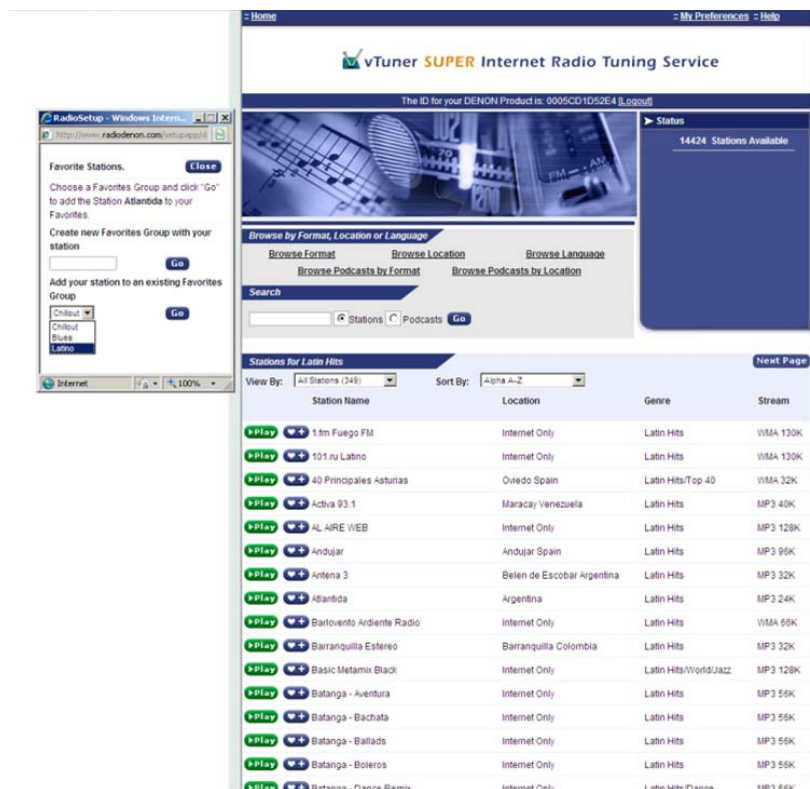

In the early days of Internet Radio most stations were internet only and run by enthusiasts of a particular genre of music but in 2010 the vast majority of Internet Radio stations are your normal AM/FM radio stations from all around the globe and they are simply re-transmitting their broadcasts over the internet. This means that anyone that has their origins overseas can now tune into their local station back home as easy as if it was just down the road.

The Denon AVR range with Internet Radio even allows you to memorise your favourite Internet Radio stations or podcasts to the Preset memory of your AVR so for future access you do not even need a TV to search a menu.

www.radiodenon.com

For those of you that have access to a computer Denon have setup a website, www.radiodenon.com which is designed to help you setup your “favourites”

This website will allow you to create your own personalised folders and search for stations by genre, location or country or even language. You will also find a thousands of podcasts that can also be placed in your folders for future quick access.

The screenshot displays the Radiodenon website interface. On the left, a 'Radiosetup' window is open, showing options to create new favorites groups or add stations to existing ones. The main website content includes a header for 'vTuner SUPER Internet Radio Tuning Service' and a search bar. Below the search bar, there are navigation links for 'Browse by Format, Location or Language' and 'Search'. The search results are displayed in a table with columns for Station Name, Location, Genre, and Stream. The results are sorted by 'Alpha A-Z' and show a list of stations such as '1.8m Fuego FM', '101.7u Latino', and '40 Principales Asturias'.

Station Name	Location	Genre	Stream
1.8m Fuego FM	Internet Only	Latin Hits	WMA 130K
101.7u Latino	Internet Only	Latin Hits	WMA 130K
40 Principales Asturias	Oviedo Spain	Latin Hits/Top 40	WMA 32K
