

Multi Zone AirPlay Audio Playback

Multi Room / Zone playback of AirPlay audio is possible with this new Denon receiver but its setup and operation is different to a conventional multi room setup

Unlike other inputs on your Denon, including other network sources such as Internet radio, Network audio and USB, AirPlay cannot be selected from your Denon.

AirPlay is actually enabled from your iTunes library or from your portable device and your Denon is then switched to AirPlay playback via your network router

When you wish to play AirPlay into your 2nd Zone you must also be listening to AirPlay in the Main Zone. Separate sources in different zones is not possible with AirPlay

How to setup AirPlay Audio for Multi Zone playback:

1. Turn on Zone 2 power and select "Source" as your 2nd Zone input
